RE: Alec Funke Recommendation Letter

I would recommend Alec Funke for any senior-level software engineering position. Having worked together at Prime Trust, Alec never failed to impress with his drive and ability to finish projects not only with short deadlines, but with little assistance. He was a key player in developing Prime Trust's payment rails and was often the go-to guy for questions related to the payments code base.

Alec has also proven to be a passionate technologist outside of Prime Trust. Recently, Alec has used Django to implement a home-grown backend and authentication mechanism for a fraternity recruitment app. He's also ventured into the world of AWS, learning services such as S3 and Route 53 to host his own blog and exploring many other key services in preparation for the AWS Software Engineer Certification.

If you want a well-rounded engineer with strong software engineering skills and cloud infrastructure know-how, look no further than Alec Funke.

Thank you,

Austin Dewey
Senior Site Reliability Engineer @ Tenable
